Products are for individual use and cannot be lined up and compared for uniformity. Slight shifting of the imprint cannot be avoided. As each product is manufactured and imprinted individually, up to 3/16" movement in logo alignment will occur. Up to 3/16" shifting can occur for each color printed, and slight shifting or misalignment of multi-color imprints is not considered a defect. The colors shown on this E-Proof may not be accurately represented on your computer monitor (All metallic inks will NOT show up as metallic on screen). Variations in print substrates/materials make it impossible to exactly duplicate PMS colors on our products. Color variation cannot be considered a defect due to ink, lighting, and material variations. Pad print decoration uses a very thin layer of ink on the substrate which can affect opacity of the image color especially when a light color is printed on a dark substrate. These changes can be more noticeable in large coverage imprints and are not considered a defect. Product and imprint color appearance can vary slightly from product to product and order to order. Exact centering or logo alignment cannot be guaranteed. Factory reserves the right to alter the imprint and imprint method to achieve the best possible result. Redos or credit will not be given under any circumstances for shifting, ink color variation, material/substrate differences from prior orders, or anything else referenced above.
